APPENDIX III - IEVENT HANDLER

```
     /**
5    * Event handler implemented by a trusted application and registered with
     * EventHandlerRegistrar.
     */
    public interface IEventHandler
    {
10     /**
        * The system will call this method when an error/info/reboot event is incurred and a
        * trusted application has registered to receive them.
        *
        * @param see - event encountered by the middleware.
15      *
        * @return If the registered application will completely handle this event, null is returned,
        * otherwise the event can be modified or returned unchanged and the system will
        * handle it.
        */
20     public IMessageEvent receiveEvent(IMessageEvent see);

       /**
        * Get any events saved by the handler.
        *
25      * @return The array of events or null if none were stored.
        */
       public IMessageEvent [ ] getEvents();
    }
```
